

$$\textcircled{1} [y^{new}, \underline{\theta}, 1 \underline{y}] \propto [y^{new}, \underline{\theta}, \underline{y}]$$

$$[\underline{y}, y^{new}, \underline{\theta}] =$$

$$[\underline{y} | y^{new}, \underline{\theta}] [y^{new} | \underline{\theta}] [\underline{\theta}]$$

\underline{y} is conditionally independent of y^{new}

$$[\underline{y} | \underline{\theta}] [y^{new} | \underline{\theta}] [\underline{\theta}]$$

So that $[\underline{y} | \underline{\theta}] [\underline{\theta}] \propto [\underline{\theta} | \underline{y}]$
+ Substitute

$$[y^{new} | \underline{\theta}] [\underline{\theta} | \underline{y}]$$

from 1

$$[y^{new}, \underline{\theta}, 1 \underline{y}] \propto [y^{new} | \underline{\theta}] [\underline{\theta} | \underline{y}]$$

Integrate out $\underline{\theta}$;

$$[y^{new} | \underline{y}] = \int_{\Omega} [y^{new} | \underline{\theta}] [\underline{\theta} | \underline{y}] d\theta$$
